Best Practices for Forecasting at Scale

When onboarding a large number of time-series, developing best practices become crucial for all the stages of forecasting. From on-boarding, pre-processing and quality checking the raw data, to choosing the forecasting models, to publishing the results and actively monitoring the resulting forecasts.

In this talk we will present the learnings from scaling the end-to-end forecasting process in a large organization. This includes data management, forecasting assessment and monitoring, communication with partners.
